Audio & Video
Installation

Specialising in design and installation of audio/visual products, Living Systems will create and bring to life the ultimate entertainment system to complete your home. We custom design a solution to suit your needs and offer a full service from concept to completion.

Entertainment made easier - by the touch of a button

Custom Audio Installation

Imagine being able to hear your favorite music anywhere in the home while another family member listens to something else in a different room. Our systems feature high-quality components discretely concealed or tastefully presented in your central audio/video area. Keypads located throughout your home serve as convenient command stations that forward requests for volume, radio station, CD track, etc., to the central system. Instantly, the room you are in, or the entire house, comes alive with beautiful stereo music playing through speakers installed flush into the walls or ceilings.

Home Theatre Systems

The home theatre experience can mean different things to different people. Whereas some like the idea of a dedicated room to capture the essence of the movies, others prefer the experience without their lounge displaying speakers, screens and audio equipment. There are many options available and we pride ourselves on meeting your personal needs.

Intele*lift*[™] - Plasma Lifts

In the past, Plasma monitors have been displayed all the time and can detract from what is an otherwise clean and tidy surrounding. Intelift units alleviate this problem and provide a certain charisma when displayed. By concealing your Plasma monitor inside your custom designed cabinet, means it only has to be displayed when you require it.

Be at the controls of your home. Having your lighting, music, climate control, irrigation and security being at the touch of a button is all possible and a lot easier than it sounds. The future really is here and all programming is done to your specifications so you can control as much or as little as you like.
